

RP-ISO-hermetic 45N/60N
RP-tec 55 / 55 plus
(FERRO-WICTEC 55 € / 55 € plus)

Curtain wall systems

Multifunctional systems:
Narrow sight lines and high
bearing capacity

RP-ISO-hermetic 45N

Profile overview

RP-ISO-hermetic 45N

x1 = We also have these profiles in stock in a length of 7.5 m.
x2 = Steel Galfan
x3 = Stainless steel 316 (1.4401)
x4 = chloroprene
--- surface/outer surface, finished grain 220/240

Accessories seals

Aluminium

- 2 TGP Seattle office, USA
- 3 PVG Presse-Vertriebs Gesellschaft KG, Frankfurt, Germany
- 4 Vapiano Dortmund, Germany

MODERN, STYLISH AND PARTICULARLY EFFICIENT

The RP-ISO-hermetic 45N curtain wall system, with the narrow sight line of the mullion and transom profile, is captivating. This meets the desire of architects and planners striving to design and install curtain walls made of composite glazing with an appearance that is as continuous as possible. By using the largest possible span widths, the static properties of this advantageous steel system bring in a maximum amount of light. Thanks to the innovative screw/plug technology, the system can be completely pre-assembled in the workshop. Installation requirements on the building site are thereby significantly reduced. RP-ISO-hermetic 45N also meets the highest standards in terms of system safety, heat insulation and fire protection. The strip galvanising on both sides of the profile also provides sufficient corrosion protection.

RP-ISO-hermetic 60N

x1 = 100% view, these profiles in stock in a length of 7.5 m.
 x2 = 50% view (CA/EAN)
 x3 = Stainless steel 316 (1.4401)
 x4 = chloroprene
 --- surface/outer surface, finished grain 220240

LARGEST POSSIBLE SPAN WIDTHS

Among curtain wall systems, the RP-ISO-hermetic 60N system is the best choice. In addition to the attributes described for the RP-ISO-hermetic 45N system, another key aspect of the RP-ISO-hermetic 60N system is its compliance with the highest statistical standards. The even larger profile measurements allow for extraordinary mullion and transom span widths. With the option to further significantly strengthen the profiles with system-compliant static inserts, seemingly impossible slender geometries are also possible. Excessive weights of glass are also supported by the system's overall concept.

NARROW, INSULATED AND A UNIFIED CONCEPT

System

- Mullion and transom curtain wall
- Sight line 55 mm
- High level of heat insulation up to $U_f \geq 0,8 \text{ W}/(\text{m}^2\text{K})$

Architecture

- Vertical curtain walls and polygonal curtain walls - up to max. 30° internal and external corners, depending on infill thickness and sight line
- Sloped glazing
 - as standard, up to 5° inclination against the horizontal
 - for specific cases, smaller inclinations are to be clarified
- Room structures
- Conservatories
- Fire protection curtain walls EI30 and E/EW30 with identical basis setup
- Identical basic concept for all RP Technik curtain walls which can be combined with all RP Technik curtain wall variations

- 6 RP Technik GmbH Profilsysteme, Bönen, Germany
- 7 Hanover Messe, Germany
- 8 Centre of Performing Arts, Dallas, USA

High-quality service & dedicated support

Health

Health and safety at work are the underpinning to a company's success. Our company's principles go much further than accident prevention: We see our health and well-being as unshakeable commitments.

Environmental protection

The environment is one of our foremost concerns. A stable environment is a prerequisite to the ongoing success of our company. Of this we are acutely aware. Environmental protection practised day in, day out represents our commitment to forging our common future. All our colleagues are unanimously dedicated to this end.

Quality

Unwavering quality controls at every step in the production process ensure RP Technik's profile systems are both flawless in design and unimpeachable in quality.

CD

All technical data relating to the profile systems and accessory components can be found on the service & documentation CD.

A LONGSTANDING, THRIVING PARTNERSHIP

The assiduous partnership cultivated day in, day out between ourselves and clients is the foundation for stable, long-lasting cooperation. As a developer of steel profile systems, RP Technik is a proven partner with all the right skills and tools at its disposal. Specialised in this domain, RP Technik's architects and planners offer customers the dedication and expertise of a company of worldwide renown. Proficiency in the area, coupled with a broad range of knowledge and expertise in the development of profile systems while focusing on personal safety and building protection is what confers that decisive advantage on RP Technik's partners when forging their way on the international markets.
